## **DETAILED OFFICE ACTION**

### **Faxing of Responses to Office Actions**

In order to reduce pendency and avoid potential delays, TC 3700 is encouraging FAXing or responses to Office Actions directly into the Group at (571) 273-8300. This practice may be used for filing papers, which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into TC 3700 will be promptly forwarded to the examiner.

### ***Election/Restrictions***

Applicant's election with traverse of Claims 4-11 in the reply filed on July 12, 2006 is acknowledged. The traversal is on the ground(s) that the article and method claims can be examined "without serious burden". This is not found persuasive because the image assembly claims do not require the particulars or a method of printing. The method of printing is examined under a different classification.

The requirement is still deemed proper and is therefore made FINAL.

*Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kim (6,269,158).

Kim discloses in Fig. 1A-1B, an image or photograph/label assembly comprising a first image on a first section (11); a second image on a second section (12 or 13); wherein the sections are detachably connected along a perforated line (22); wherein the first image can be a photograph; wherein the second section can be a label (13).

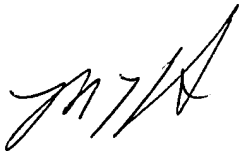

In regards to Claim 4 and 6, wherein the second image can be used as an identifier for the first image, or a tab image, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. Therefore, the second image can be used purposely in any desirable manner by the end user.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lowry et al, and Carlson disclose similar image assemblies.
